## 2. Test Summary

The Product has been tested according to the following specifications:

EMISSION		
Standard	Test Item	Test result
EN IEC 61000-6-3	Conducted Emission	N/A <sup>1</sup>
EN IEC 61000-6-3	Radiated Emission	Pass

IMMUNITY (EN IEC 61000-6-1)		
Standard	Test Item	Test result
EN IEC 61000-6-1	Electrostatic discharge (ESD)	Pass
EN IEC 61000-6-1	Radio-frequency electromagnetic field(RS)	Pass
EN IEC 61000-6-1	Fast transients (EFT)	N/A <sup>1</sup>
EN IEC 61000-6-1	Surges	N/A <sup>1</sup>
EN IEC 61000-6-1	Radio-frequency common mode(CS)	N/A <sup>1</sup>
EN IEC 61000-6-1	Power-frequency magnetic fields (PFMF)	N/A <sup>2</sup>
EN IEC 61000-6-1	Voltage dips and voltage interruptions (DIPS)	N/A <sup>1</sup>

Remark:

1. The EUT is powered by the DC only, the test item is not applicable.
2. The Product doesn't contain any device susceptible to magnetic fields.

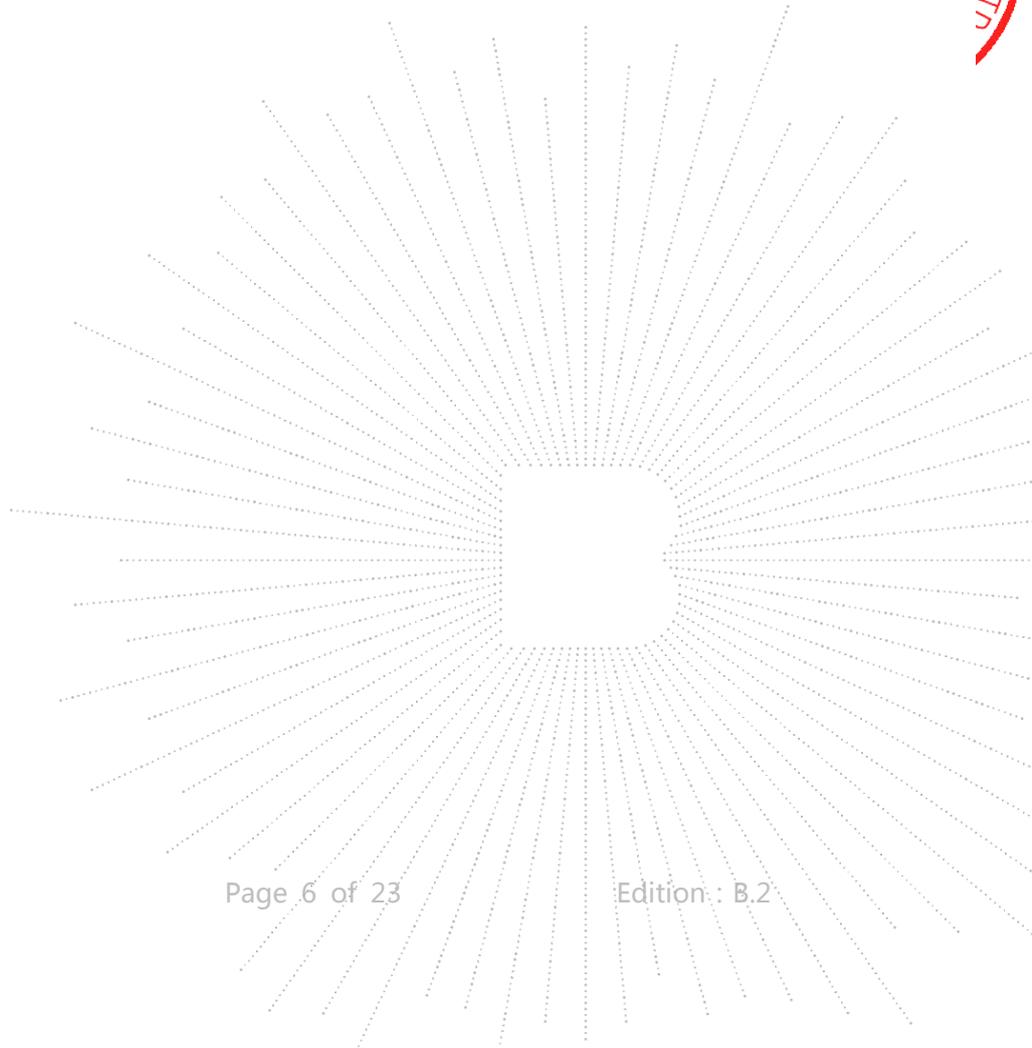

### 3. Measurement Uncertainty

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the Product as specified in CISPR 16-4-2. This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of  $k=2$ .

Test item	Value (dB)
Radiated disturbance (30MHz-200MHz)	4.60
Radiated disturbance (200MHz-1000MHz)	5.20

CO., LTD

## 4. Product Information And Test Setup

### 4.1 Product Information

**Ratings:** DC 5-24V  
**Model difference:** Main test model XKC-Y25-V: The model difference is named according to the market demand, only the model is different and the others are the same

**Cable of Product**

No.	Cable Type	Quantity	Provider	Length (m)	Specification	Note
1	--	--	--	--	--	--
2	--	--	--	--	--	--

### 4.2 Test Setup Configuration

See test photographs attached in EUT TEST SETUP Photographs for the actual connections between Product and support equipment.

### 4.3 Support Equipment

No.	Device Type	Brand	Model	Series No.	Note
1.	Adapter	Hoco	N18	---	---

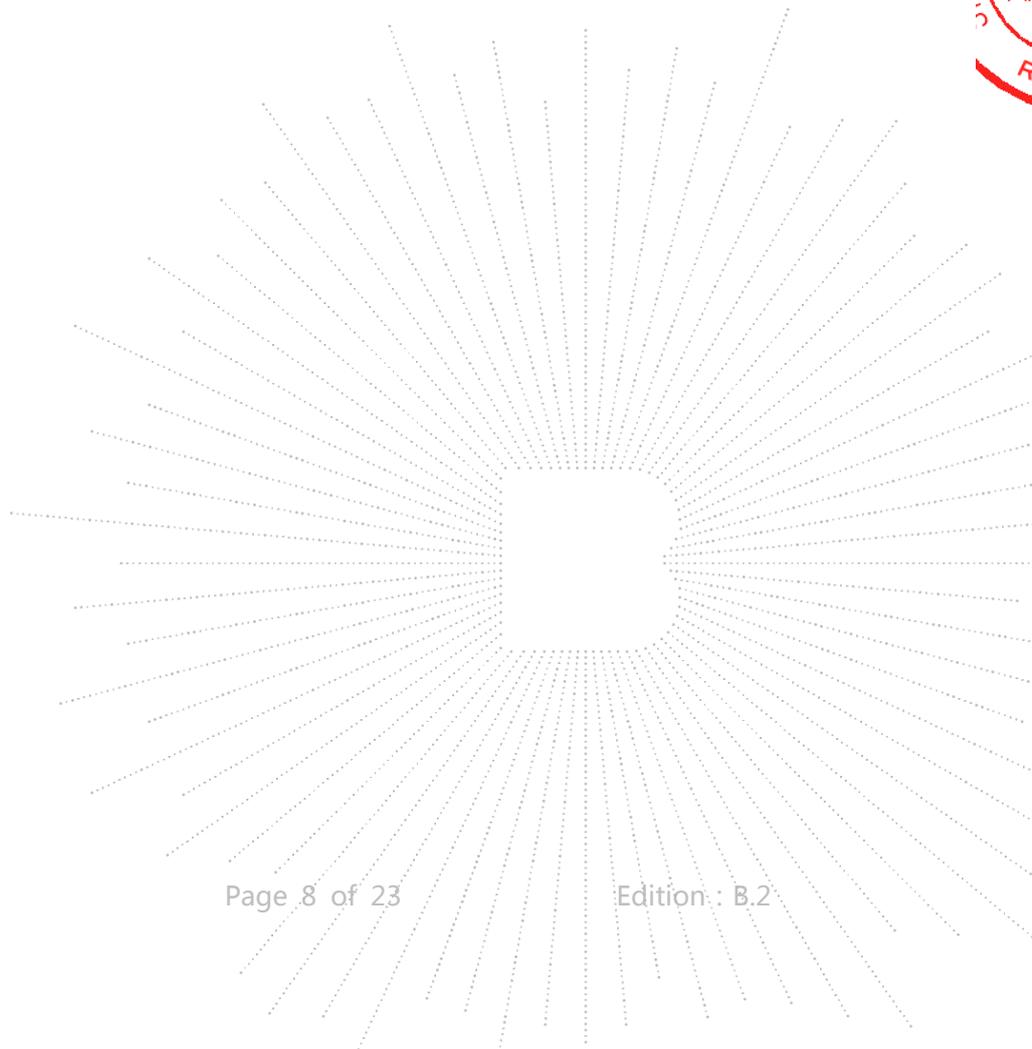

**Notes:**

1. All the equipment/cables were placed in the worst-case configuration to maximize the emission during the test.
2. Grounding was established in accordance with the manufacturer's requirements and conditions for the intended use.

#### 4.4 Test Mode

Test item	Test Mode	Test Voltage
Radiated emission(30MHz-1GHz)	Working	DC 5V From Adapter
Electrostatic discharge (ESD)B <input checked="" type="checkbox"/> Air Discharge: $\pm 8\text{Kv}$ <input checked="" type="checkbox"/> Contact Discharge: $\pm 4\text{kV}$ <input checked="" type="checkbox"/> HCP & VCP: $\pm 4\text{kV}$ 10 times each point/	Working	DC 5V From Adapter
Continuous RF electromagnetic field disturbances(RS) 80MHz-1000MHz, 1400MHz-6000MHz, 10V/m,80% AM Front, Rear, Left, Right H/V	Working	DC 5V From Adapter

## 5. Test Facility and test Instrument Used

### 5.1 Test Facility

All measurement facilities used to collect the measurement data are located at Shenzhen BCTC Testing Co., Ltd. Address: 1-2/F., Building B, Pengzhou Industrial Park, No.158, Fuyuan 1st Road, Zhancheng, Fuhai Subdistrict, Bao'an District, Shenzhen, Guangdong, China. The site and apparatus are constructed in conformance with the requirements of ANSI C63.4 and CISPR 16-1-1 other equivalent standards.

## 6. Radiated Emission Test

### 6.1 Block Diagram Of Test Setup

30MHz ~ 1GHz:

### 6.2 Limits

Frequency (MHz)	Quasi-peak limits at 3m dB( $\mu$ V/m)
30-230	40
230-1000	47

**Note:** The lower limit shall apply at the transition frequencies.

### 6.3 Test Procedure

30MHz ~ 1GHz:

- The Product was placed on the nonconductive turntable 0.8 m above the ground in a semi anechoic chamber.
- Set the spectrum analyzer/receiver in Peak detector, Max Hold mode, and 120 kHz RBW. Record the maximum field strength of all the pre-scan process in the full band when the antenna is varied between 1~4 m in both horizontal and vertical, and the turntable is rotated from 0 to 360 degrees.
- For each frequency whose maximum record was higher or close to limit, measure its QP value: vary the antenna's height and rotate the turntable from 0 to 360 degrees to find the height and degree where Product radiated the maximum emission, then set the test frequency analyzer/receiver to QP Detector and specified bandwidth with Maximum Hold Mode, and record the maximum value.

### 6.4 Test Results

Temperature:	26 °C	Relative Humidity:	54%RH
Pressure:	101KPa	Phase :	Horizontal
Test Voltage :	DC 5V From Adapter	Test Mode:	Working

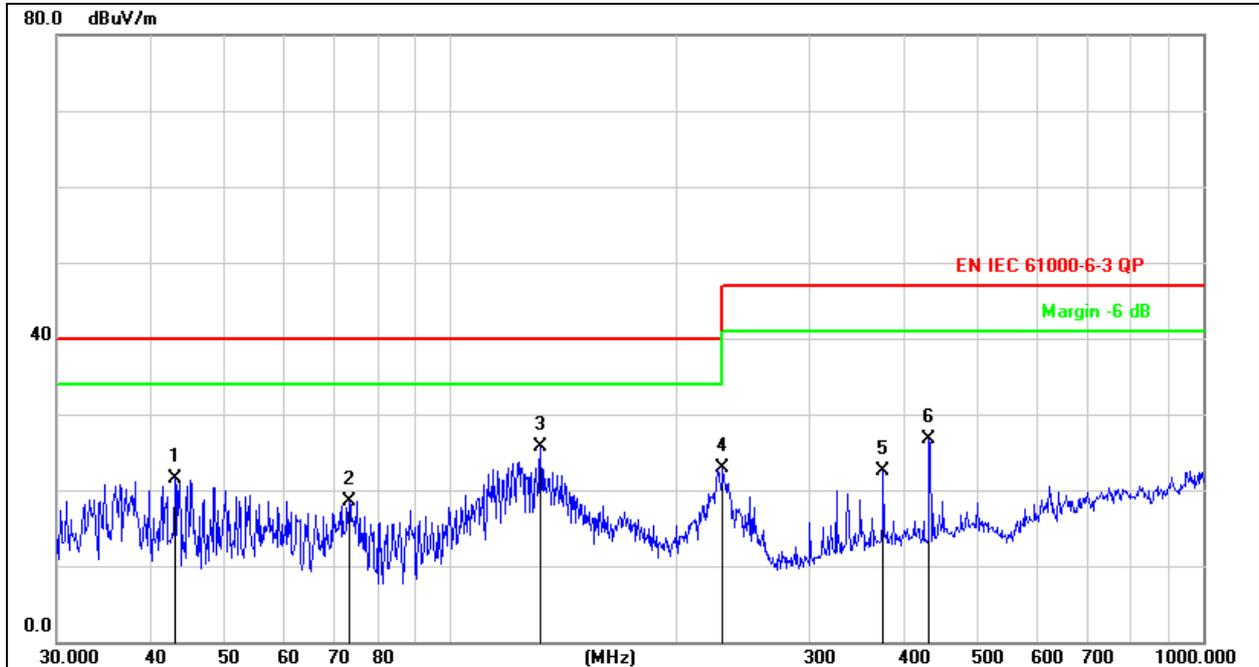

**Remark:**

1. Factor = Antenna Factor + Cable Loss – Pre-amplifier.
2. Measurement = Reading Level + Correct Factor
3. Over = Measurement - Limit

## 7. Immunity Test Of General The Performance Criteria

Product Standard	EN IEC 61000-6-1:2019 Clause 4
<b>CRITERION A</b>	The apparatus shall continue to operate as intended during and after the test. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer, when the apparatus is used as intended. The performance level may be replaced by a permissible loss of performance. If the minimum performance level or the permissible performance loss is not specified by the manufacturer, either of these may be derived from the product description and documentation and what the user may reasonably expect from the apparatus if used as intended.
<b>CRITERION B</b>	The apparatus shall continue to operate as intended after the test. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer, when the apparatus is used as intended. The performance level may be replaced by a permissible loss of performance. During the test, degradation of performance is however allowed. No change of actual operating state or stored data is allowed. If the minimum performance level or the permissible performance loss is not specified by the manufacturer, either of these may be derived from the product description and documentation and what the user may reasonably expect from the apparatus if used as intended.
<b>CRITERION C</b>	Temporary loss of function is allowed, provided the function is self-recoverable or can be restored by the operation of the controls.

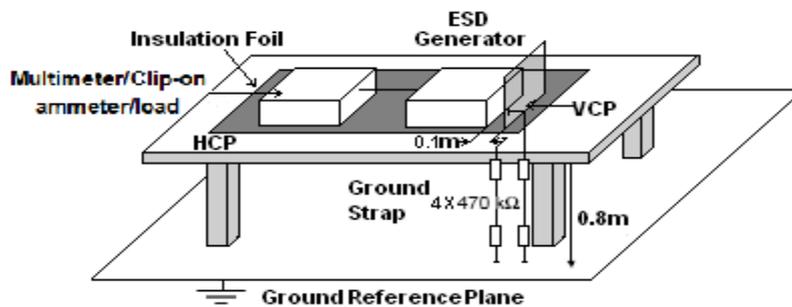

## 8. Electrostatic Discharge (ESD)

### 8.1 Test Specification

<b>Basic standard</b>	: IEC 61000-4-2
<b>Test Port</b>	: Enclosure port
<b>Discharge Impedance</b>	: 330 ohm / 150 pF
<b>Discharge Mode</b>	: Single Discharge
<b>Discharge Period</b>	: one second between each discharge

### 8.2 Block Diagram of Test Setup

### 8.3 Test Procedure

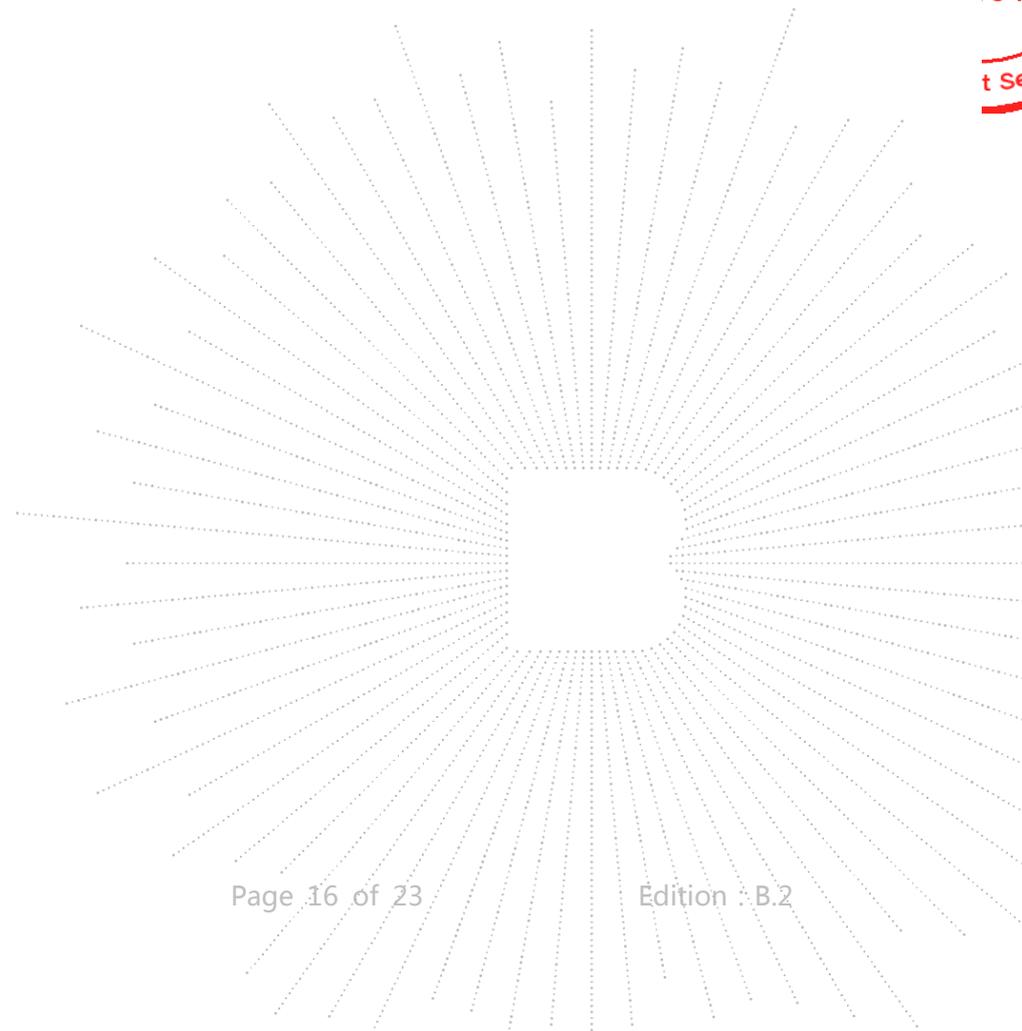

- Electrostatic discharges were applied only to those points and surfaces of the Product that are accessible to users during normal operation.
- The test was performed with at least ten single discharges on the pre-selected points in the most sensitive polarity.
- The time interval between two successive single discharges was at least 1 second.
- The ESD generator was held perpendicularly to the surface to which the discharge was applied and the return cable was at least 0.2 meters from the Product.
- Contact discharges were applied to the non-insulating coating, with the pointed tip of the generator penetrating the coating and contacting the conducting substrate.
- Air discharges were applied with the round discharge tip of the discharge electrode approaching the Product as fast as possible (without causing mechanical damage) to touch the Product. After each discharge, the ESD generator was removed from the Product and re-triggered for a new single discharge. The test was repeated until all discharges were complete.
- At least ten single discharges (in the most sensitive polarity) were applied to the Horizontal Coupling Plane at points on each side of the Product. The ESD generator was positioned vertically at a distance of 0.1 meters from the Product with the discharge electrode touching the HCP.
- At least ten single discharges (in the most sensitive polarity) were applied to the center of one vertical edge of the Vertical Coupling Plane in sufficiently different positions that the four faces of the Product were completely illuminated. The VCP (dimensions 0.5m x 0.5m) was placed vertically to and 0.1 meters from the Product.

## 8.4 Test Results

Temperature:	26 °C	Relative Humidity:	54%RH
Pressure:	101kPa	Test Mode:	Working
Test Voltage :	DC 5V From Adapter		

Discharge Method	Discharge Position	Voltage (±kV)	Min. No. of Discharge per polarity (Each Point)	Required Level	Performance Criterion
Contact Discharge	Conductive Surfaces	4	10	B	A
	Indirect Discharge HCP	4	10	B	A
	Indirect Discharge VCP	4	10	B	A
Air Discharge	Slots, Apertures, and Insulating Surfaces	8	10	B	A

## 9. Radio-Frequency Electromagnetic Field (RS)

### 9.1 Test Specification

<b>Basic standard</b>	: IEC 61000-4-3
<b>Test Port</b>	: Enclosure port
<b>Step Size</b>	: 1%
<b>Modulation</b>	: 1kHz, 80% AM
<b>Dwell Time</b>	: 1 second
<b>Polarization</b>	: Horizontal & Vertical

### 9.2 Block Diagram of Test Setup

Below 1GHz:

### 9.3 Test Procedure

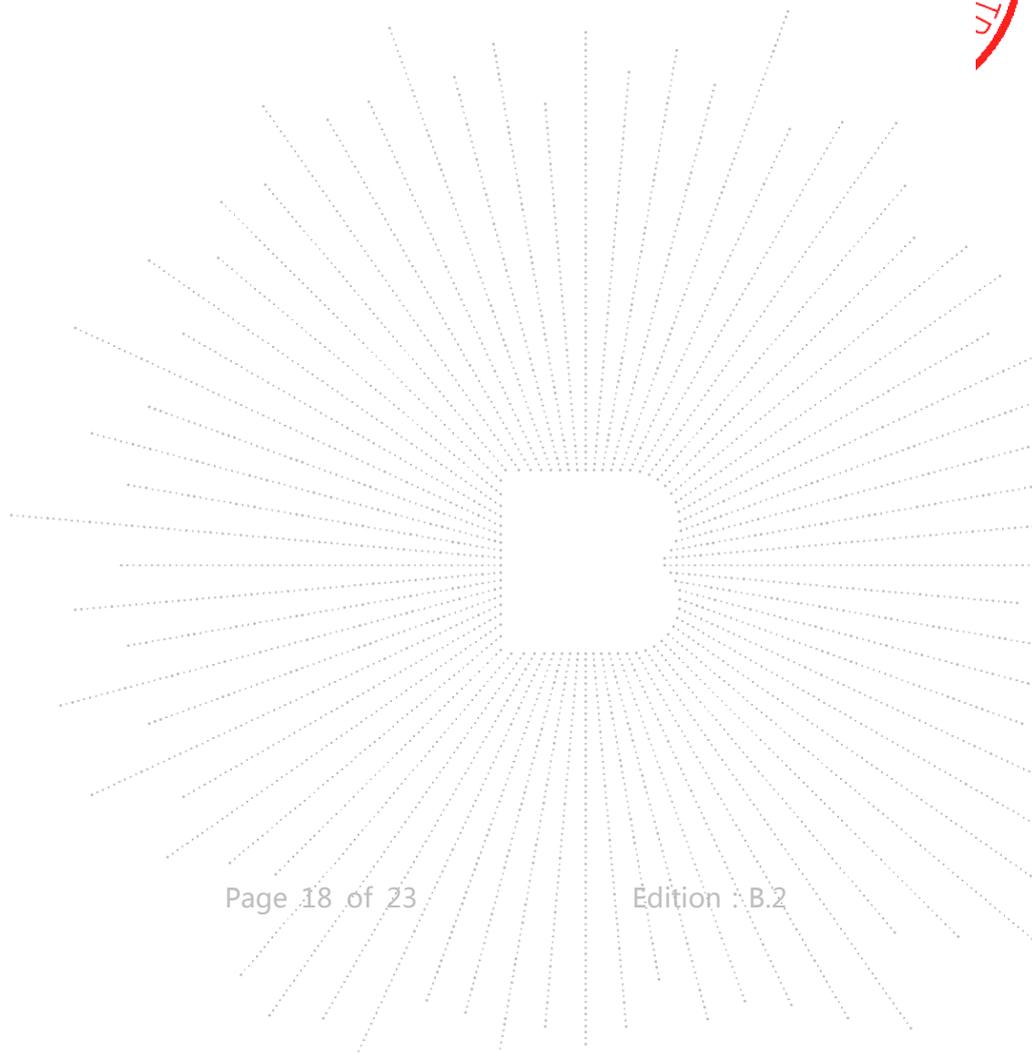

- The testing was performed in a fully-anechoic chamber. The transmit antenna was located at a distance of 3m or 1m from the Product.
- The frequency range is swept from 80MHz to 1000MHz and 1400MHz to 2700MHz, with the signal 80% amplitude modulated with a 1 kHz sine wave. The rate of sweep did not exceed  $1.5 \times 10^{-3}$  decade/s. Where the frequency range is swept incrementally, the step size was 1%.
- The test was performed with the Product exposed to both vertically and horizontally polarized fields on each of the four sides.

## 9.4 Test Results

Temperature:	26 °C	Relative Humidity:	54%RH
Pressure:	101kPa	Test Mode:	Working
Test Voltage :	DC 5V From Adapter		

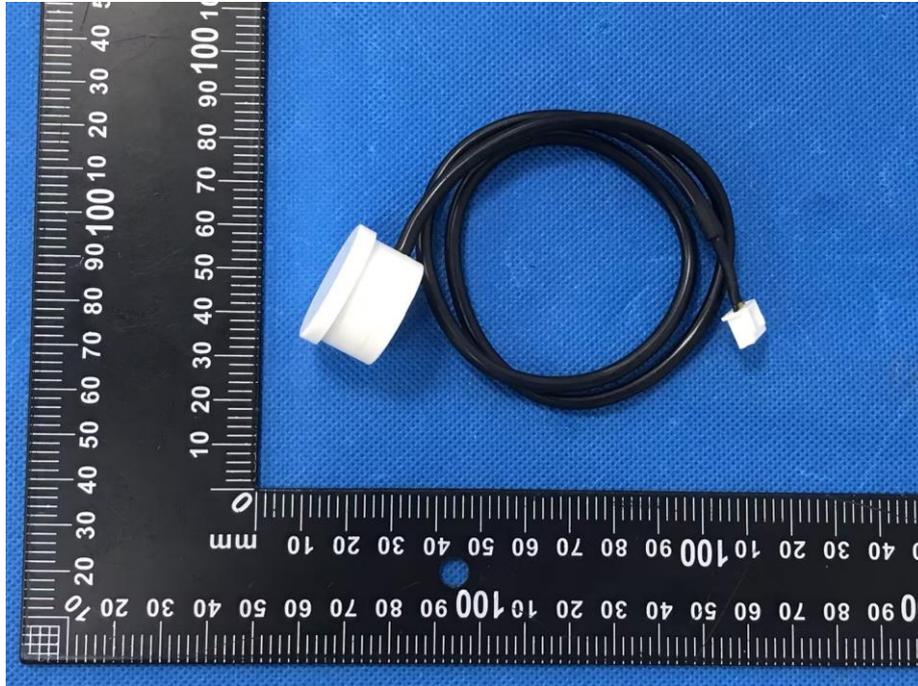

Frequency(MHz)	Position	Field Strength (V/m)	Required Level	Performance Criterion
80 - 1000	Front, Right, Back, Left	10	A	A
1400 - 6000	Front, Right, Back, Left	10	A	A

**STATEMENT**

1. The equipment lists are traceable to the national reference standards.
2. The test report can not be partially copied unless prior written approval is issued from our lab.
3. The test report is invalid without the "special seal for inspection and testing".
4. The test report is invalid without the signature of the approver.
5. The test process and test result is only related to the Unit Under Test.
6. Sample information is provided by the client and the laboratory is not responsible for its authenticity.
7. The quality system of our laboratory is in accordance with ISO/IEC17025.
8. If there is any objection to this test report, the client should inform issuing laboratory within 15 days from the date of receiving test report.
